

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1 through 23. [Canceled]

24. [New] A contact for an interrupter assembly comprising:

- (a) an electrically conductive material having a center, an outer edge, a top, and a bottom;
- (b) a first magnetic material having a high magnetic saturation point, the first magnetic material being located within the electrically conductive material between the top and the bottom and in closer proximity to the outer edge than the center of the electrically conductive material; and
- (c) a second magnetic material having a low magnetic saturation point, the second magnetic material being located within electrically conductive material between the top and the bottom and in closer proximity to the center than the outer edge of the electrically conductive material.

25. [New] The contact of claim 24 wherein the first magnetic material has a high magnetic permeability and the second magnetic material has a low magnetic permeability.

26. [New] The contact of claim 24 wherein the first magnetic material is located substantially outside the second magnetic material relative to the center of the electrically conductive material.

27. [New] The contact of claim 24 wherein there is no physical contact between the first and second magnetic materials.

28. [New] A contact for an interrupter assembly comprising:
- (a) a body and a stem formed of an electrically conductive material, the body having a center, an outer edge, a top, and a bottom, and the stem being integrally attached to the body bottom;
  - (b) a first magnetic material having a high magnetic saturation point, the first magnetic material being located within the body between the top and bottom and in closer proximity to the outer edge than the center of the body; and
  - (c) a second magnetic material having a low magnetic saturation point, the second magnetic material being located within the body between the top and the bottom and in closer proximity to the center of the body than the outer edge of the body, .
29. [New] The contact of claim 28 wherein the first magnetic material has a high magnetic permeability and the second magnetic material has a low magnetic permeability.
30. [New] The contact of claim 28 wherein the first magnetic material is located substantially outside the second magnetic material relative to the center of the body.
31. [New] The contact of claim 28 wherein there is no physical contact between the first and second magnetic materials.
